

# **Attack on titan**

**In my opinion attack on titan issue 1 is an interesting book because of its action, art style, and how the characters interact with each other. I liked this book because it doesn't only focus on the action, i liked the characters reactions to the titans attacking their home, i also like how the characters develop over time because of the titans attacking their home. The mood became more serious after that attack from the titans and it shows how the characters wont really be the same after that incident. This also sets the tone for the rest of the series. I also like how some of the characters are relatable and react in realistic ways to the situations they're put in.**

**Most of the characters in this book experience real emotion like fear and anger. This book is also really good and making sure the readers will have a hard time trying to guess what comes next because of all the unexpected things that happen in it. To me this story feels more human and emotional compared to most books. Another thing this book does really well is capturing the characters emotions and making them stick to the reader, one example is when the main character eren made a promise to kill all titans, at that point it was clear what his goal was and he was determined from that point on. I also like how this book does a good job at showing the theme of determination , for most of the story lots of characters are full of fear and look hopeless, there is only few characters that show hints of determination and bravery. Overall i do think this book was really interesting and had tons of strong chapters. With finishing one chapter and makes me curious and wanting to read more.**

**I do think this book is for a more mature audience, as for highschool students. I think 10th grade and up should be more mature and should be able to handle this book since it does show some gruesome scenes that involve blood.**
